

OPENING WEBSITE IN MOBILE

1. Open project in VS Code

- Open VS Code
- Click File → Open Folder
- Select your project folder
- Open your index.html file

2. Install Live Server

- Press Ctrl + Shift + X
- Search 'Live Server'
- Install Live Server (Ritwick Dey)
- Restart VS Code

3. Start Live Server

- Right-click index.html → Open with Live Server
- OR click Go Live at bottom-right
- Note the URL (example: `http://localhost:5500/html/`)

4. Test on laptop

- Open Chrome
- Type the full link:
`http://localhost:5500/html/index.html`

5. Find your laptop IPv4 address

- Press Windows + R → type cmd → Enter
- In CMD type: ipconfig
- Look for IPv4 Address (example: 192.168.1.34)

6. Open website on your phone

- Connect phone + laptop to SAME Wi-Fi
- On your phone browser type:
`http://YOUR_IPV4:5500/html/index.html`

7. If it does NOT open — try these

- Allow VS Code + Node.js through Windows Firewall
- VS Code Settings → Live Server → Host = 0.0.0.0
- Change port: Ctrl + Shift + P → Live Server: Change Port → 5502
- Try again:
`http://YOUR_IPV4:5502/html/index.html`

8. Remove '/html/' from URL (optional)

- Move index.html to main folder:
project/
index.html
css/

js/
images/
- Restart Live Server
